Spring

AOP: Proxy Weaving Gotchas
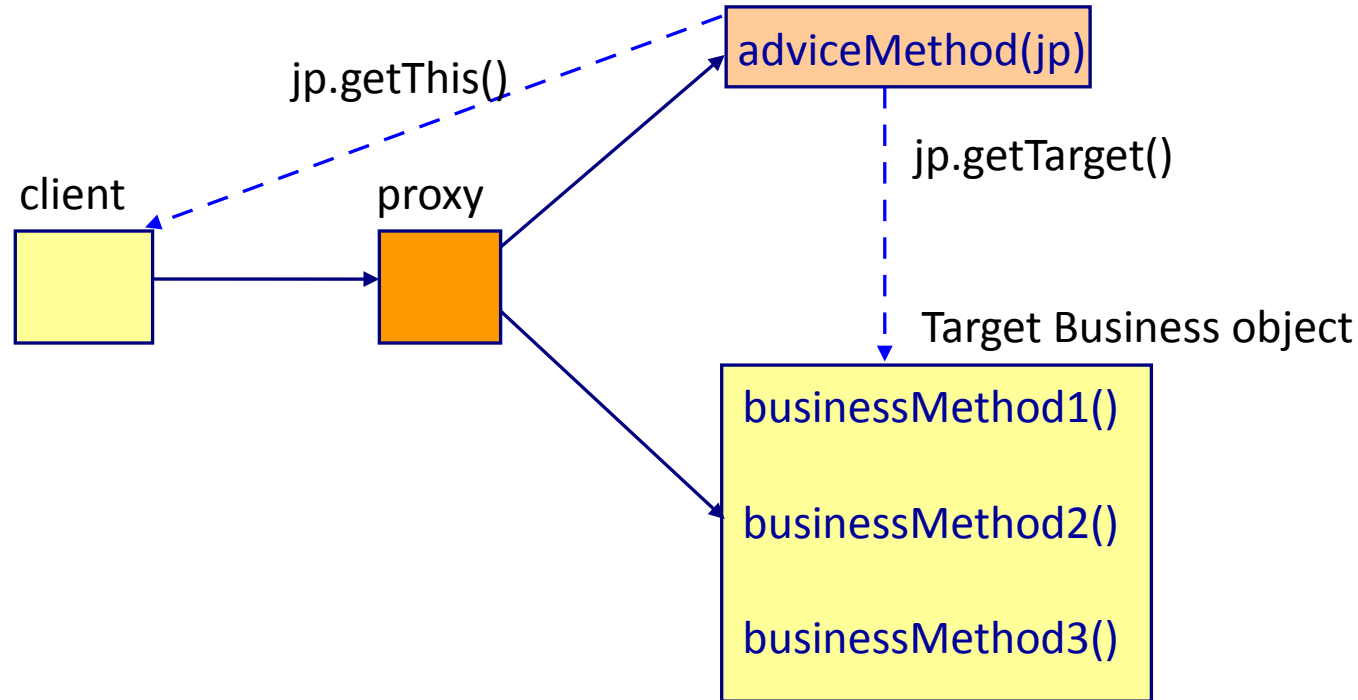

Local calls

- There is **no way** for Spring to **intercept** a local call with a proxy

Aspect

adviceMethod()

client

proxy

Target Business object

businessMethod1()

businessMethod2()

businessMethod3()

Calls to Target

- Similarly, if you invoke methods directly on Target or client, **no AOP**!

No Weaving During Startup

- During **Spring startup** there is **no AOP**

- Not during any of these activities

  - Bean creation

  - Reference injection

  - Value injection

  - Postconstruct Init method
